INTRODUCTION

In very simple terms main objective for designing this web application 'Sociobook' is to create a platform for youngsters where they can share posts, comment on them by creating account. It manages all the information about Users, Posts, Friends, Users. The project is totally built at administrative end and thus only the administrator is guaranteed the access.

Social networking sites are not only for you to communicate or interact with other people globally but, this is also one effective way for business promotion. A lot of business minded people these days are now doing business online and use these social networking sites to respond to customer queries. It isn't just a social media site used to socialize with your friends but also, represents a huge pool of information from day to day living.

EXISTING SYSTEM

The social networking website is an online community designed to make your social life more active and stimulating. The social network can help you maintain existing relationships with people and share pictures and messages, and establish new ones by reaching out to people you've never met before.

Frenzoholic is a Social Networking Website which a web based service providing its users to construct a public or semi public profile within a bounded system.

This website provides the features of keeping intact with one and all at one place. Frenzoholic lets keep in touch with your peers and pals , without boring you at the same time.

Frenzoholic has various other attractive features of technofreaks. Its coming up with new world which will be enjoying for every section of society
